GRAIN TRANSSHIPMENT AND STORAGE FACILITY

This project was designed for broadening the scope of already existing port terminal.

We delivered solutions for selection and allocation of technological equipment within already existing grain transshipment and storage facility for purposes of modernisation and extension.

Two additional storage units for storing grain on the ground were integrated.

The project was delivered as a technological solution and was accepted by the client for further construction.

Tasks achieved:

Integrated weighting unit

Two additional storage units for storing grain on the ground, integrated within the existing system.

Grain loading into railway and autotransport.
